

DEWORMING SCHEDULE GUIDELINES for FECAL TESTED HORSES

The worming schedule below provides an effective parasite control program. Good pasture sanitation and rotation, along with composting and avoiding ground-level feeding can dramatically decrease exposure. It is no longer necessary to tube deworm horses. Paste dewormers are just as effective, provided you are using the correct dose of the proper product and you are sure the horse swallows all of the medication. The brands listed below are generally preferred as the most effective. Rotation can be determined by what is less costly, but try to stay within the guidelines.

	<u>LOW SHEDDERS</u> (0-200)	<u>MEDIUM SHEDDERS</u> (201-500)	<u>HIGH SHEDDERS</u> (>501)
FEBRUARY			IVERMECTIN
APRIL	IVERMECTIN OR MOXIDECTIN*	MOXIDECTIN*	MOXIDECTIN*
JUNE			IVERMECTIN
JULY		IVERMECTIN	
AUGUST			FENBENDAZOLE
SEPTEMBER		PYRANTEL PAMOATE	PYRANTEL PAMOATE
NOVEMBER	IVERMECTIN with PRAZIQUANTEL OR MOXIDECTIN* with PRAZIQUANTEL	IVERMECTIN with PRAZIQUANTEL OR MOXIDECTIN* with PRAZIQUANTEL	IVERMECTIN with PRAZIQUANTEL OR MOXIDECTIN* with PRAZIQUANTEL

WARNING *DO NOT USE MOXIDECTIN (QUEST OR QUEST PLUS)
ON HORSES LESS THAN 6 MONTHS OF AGE, SMALL PONIES, OR MINIATURE HORSES
